

Propad™ Mattress Overlay

High specification pressure
redistributing overlay

The **Propad Overlay** is designed to be placed on top of an existing conventional mattress, providing a high level of patient comfort with excellent pressure redistribution abilities. The overlay is lightweight, available in a range of sizes and suitable for those considered at 'High Risk'* of developing pressure ulcers, making it ideal for the homecare environment.

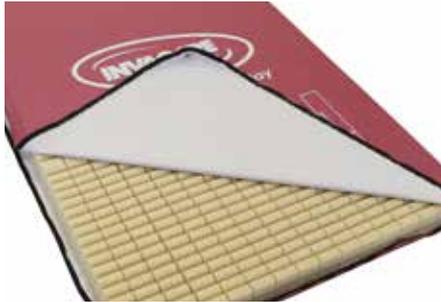

Effective Pressure Ulcer Prevention

The foam core has independent, geometrically-cut surface cells which help to reduce shear and friction, whilst increasing the overall support surface area, thereby reducing peak pressure.

Even Weight Distribution

The **Propad Overlay** has larger, more supportive cells at the centre and smaller cells at each end, enabling the mattress overlay to achieve even weight distribution by conforming to the shape and form of the body and to cradle bony prominences.

Features and Options

Cover helps to alleviate shear and friction forces

Cover is multi-stretch, water-resistant and vapour-permeable. A white underside makes it easy to inspect to assist with infection control.

Available in a range of sizes

Single - 187.5 x 87.6 x 8.5 cm,
Double - 187.5 x 137.2 x 8.5 cm,
King Size - 198 x 152.4 x 8.5 cm.

Covers have an anti-slip base

Ensures safe use of the **Propad Overlay** and helps to prevent slippage, reducing the risk of falls.

Warranty

3 Years

Manufactured to European Standards:
BS 7177 Crib 5

* Essential nursing care is pivotal in pressure ulcer prevention. This product will positively contribute to the outcome of a pressure ulcer prevention care plan. Education, clinical judgement and action based planning based on vulnerability are fundamental factors in the prevention of pressure ulcers. A range of assessment scales can be used as a formal method of assessing risk from pressure ulcer development, and should be used in conjunction with an informal assessment (informed nursing judgement). Informal assessment is considered to be of greater importance and clinical value. The risk category in this instance is based on the Waterlow Scale.
